

Company Profile

Raising Steel with Safety & Quality

About SVD Constructions

Established in 2019, SVD Constructions is focused on industrial construction projects that primarily involved fabrication and erection of structural steel, prefabricated buildings, façade works. With the experience of many years in construction and steel building manufacturing sector, SVD Constructions was founded to provide high-end solutions to all kind of steel buildings requirements from fabrication to erection.

As a company that is based in Singapore, we have the chance of easy access to high quality materials, technical resources. This advantage is allowing us to provide all sort of steel building solutions for Industrial, commercial and heavy steel structure. As a result of the leverage effect of strong technical knowledge and management skills, SVD Constructions serves with its solution partners for relatively large scale projects. With the wide experience of Project Management, SVD constructions is able to ensure a reliable environment for the stakeholders by conducting the processes correctly.

Health, Safety and Environment

Our work is one of the most hazardous job that includes many hazardous task and conditions such as working at height, power tools and equipment, lifting operations. Within the field of construction, it is important to have the guidance of safe working method that are tested previously. Our safety program helps us to extract well documented safe methods from our past experiences. That is the way we complete complex tasks safely by good planning.

Quality Assurance

In the projects we undertake, we proceed by performing the necessary checks at all stages to ensure the exacting technical specifications and standards. Developing technology and changing business environment has created new standards in our sector. We are aiming to keep up to date with these changes and developments.

Project Management and Workmanship

Fabrication & Erection of Steel Structures

SVD Constructions provides Fabrication and Erection services of light and heavy steel structure for industrial requirements. Warehouses, Heavy industrial, High rise buildings are some samples which are related with that area of service.

Integrated Steel Execution – One PM, One Plan (Fabrication & Erection)

Splitting fabrication, erection, and adjacent trades often creates interface gaps—miscommunication, rework, and variance against schedule/cost baselines. SVD Constructions removes that risk with single-point accountability across the steel execution scope. We manage fabrication, logistics, heavy lifting, precise erection, inspections, and turnover under one project manager and one schedule, while coordinating with client-appointed designers/detailers and third-party façade/roof contractors to keep interfaces clean and milestones on track.

Steel Supply Works

SVD Constructions supplies carbon, stainless and alloy to EN/ASTM/JIS standards in common forms—plate, UB/UC, channels, angles, RHS/SHS/CHS, rounds, and pipe & fittings (typical: S235/S275/S355, A36/A572 Gr.50, SS400, 304/304L/316/316L/321/2205, 4140/4340, D2/O1/H13). We add speed and accuracy with cutting, drilling/tapping, beveling, rolling, press braking, section bending, shot-blast + shop primer with DFT checks, and kitting/marking.

Quality is backed by 3.1 MTCs (3.2 on request), optional PMI/UT/PT/MT/mechanical tests, and full heat-number traceability. If the grade is undecided, we review drawings/specs and service conditions and propose 2-3 compliant options for client/EOR approval. Sourcing is ex-stock or mill-direct, export-packed and sequenced to your installation, with logistics aligned to our fabrication & erection packages. For a fast RFQ, share target standard/grade or application, sizes/tonnage, testing & primer/DFT, delivery window, and any pre-fab.

Manufacturing

Despite being a relatively young company, the design and production experience gained by the management team for many years creates a leverage effect regarding all types of light and heavy steel buildings. We trust our experienced and certified team of welders that always does their work in compliance with necessary standards.

General Contracting and Construction

General Contracting and Construction, SVD constructions serves mainly as a contractor, subcontractor or service provider for projects related to steel structures. Our range of services allow us to deliver integrated turnkey solutions for work all work packages like fabrication, erection, facade and roof works related with steel buildings. Some types of commercial and residential buildings that we provide solutions are as below.

High-rise buildings

Heavy roof truss

Steel mounds

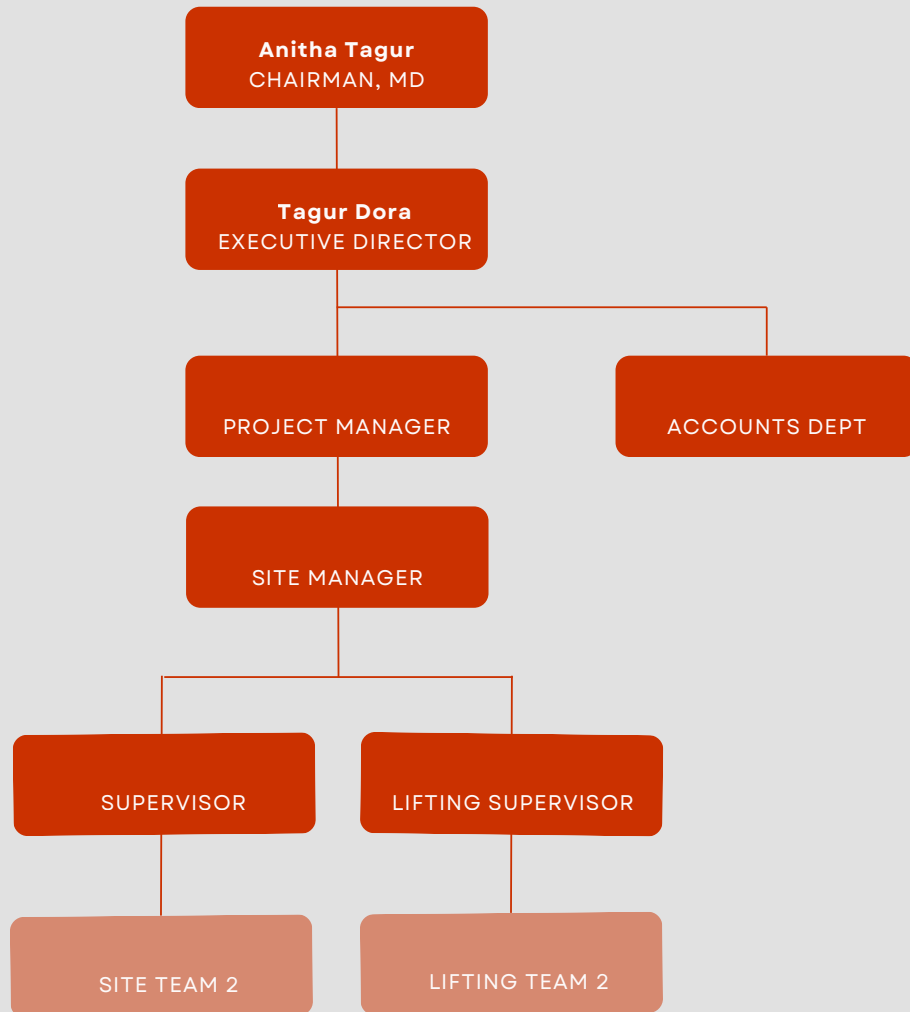

Piperack.

Warehouses

Link bridges

Heavy steel structure

Key management

ANITHA TAGUR

CHAIRMAN,MD

Mrs. Anitha Tagur is the Chairperson and Managing Director of SVD Constructions. With an MBA and a strong background in accounting, she provides overall direction for the company and ensures that the business is run on solid financial and ethical foundations. Her main focus is on the financial side of the company - overseeing accounting, budgeting, banking, cash flow and statutory compliance. She works closely with the management team to make sure projects are supported with timely commercial decisions, healthy cash flow and transparent reporting to clients, suppliers.

TAGUR DORA
EXECUTIVE DIRECTOR

Mr. Tagur Dora is the Executive Director of SVD Constructions and brings over 25 years of hands-on experience in structural steel and industrial construction. Starting his career on site and progressing through project management and leadership roles, he has been directly responsible for the safe and timely delivery of complex steel erection works, including heavy structural beams, trusses, crane girders, link bridges, catwalks and high-bay industrial buildings.

At SVD Constructions, Mr. Tagur Dora provides overall strategic direction and leads project execution, resource planning and client relationships. His leadership is strongly site-driven: he is actively involved in lift planning reviews, method selection for erection, coordination with main contractors and consultants, and the resolution of interface issues with other trades.

Known for his focus on safety, buildability and schedule reliability, Mr. Dora has built long-term relationships with major contractors and plant owners by consistently delivering work packages with clear communication and strict adherence to quality and HSE requirements.

Keppel Sakra Cogeneration Plant, Jurong Island

Scope- Installation scope includes heavy structural steel works and crane girder beams at Turbine building , link bridges, and catwalks. For this project, we adopted the Tatekata base system, eliminating the need for guy wires and heavy counterweights.

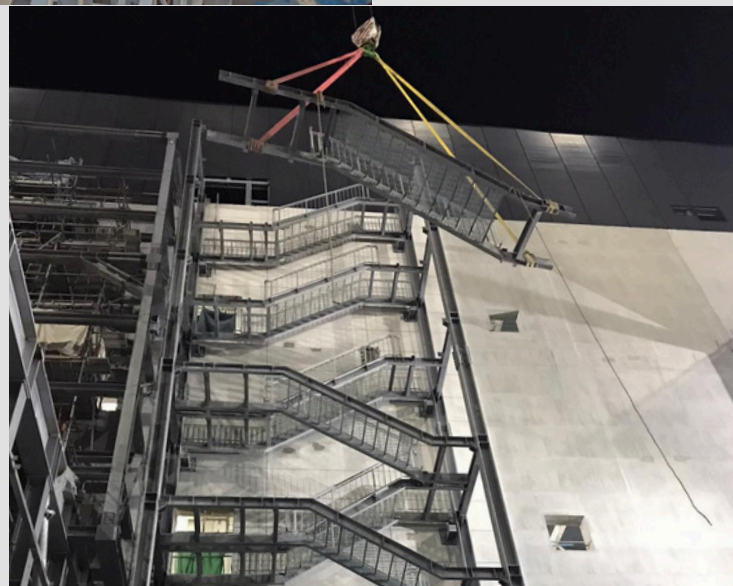

VSMC Vision Power Semiconductor Manufacturing Company

Scope- Installation of heavy steel structure & Cat walks

Siltronic Silicon Wafer Pte Ltd, Tampines

Scope- Installation scope includes structural steel works, Cooling tower , Louvres , Staircases & Platforms.

Paxocean Engineering PTE LTD, Pulau Samulan

Scope- Installation scope includes structural steel works for Workshop, Warehouse & Ancillary office.
